DNS Services: What are DNSExit name servers

To use our DNS services, you can change the name servers of the domain to the following name server:

ns1.dnsexit.com

ns2.dnsexit.com

ns3.dnsexit.com

ns4.dnsexit.com

If your domain is not registered with us, you can change the name servers for the domain at the domain's current registrar. All registrars should provide you the access to change name servers. To find out which the name servers the domain is using, you can use DOS/Linux command (replace mydomain.com with your domainname):

  c:> nslookup -type=mx mydomain.com

Remember changing name servers for your domain may take up to 48 hours to have the change fully propagated. At the first few hours, the queries for your domain could still go to the old name servers to resolve.
