Mail Hosting (POP3+Mail Relay): How do I setup my email client to check my emails?

Assume that your email address is **myemail@ mydomain.com**. The settings for all the email clients, including Outlook, Thunder Bird, IPad, IPhone, Android, are similar. Usually , you need to tell the email client the incoming and outgoing SMTP(mail) server and the username/password for the server.

The following are the configurations that you will need for your email client:

Incoming POP/IMAP Server (for email receiving)

Hostname: **pop.dnsexit.com**

Username: youremail@ yourdomain.com (remember to use your whole lower email address as username)

Password: xxxxx (the password you choose for the mail box)

IMAP Port: 143

POP Port: 110

Outgoing Mail Server (for email sending)

Hostname: **out.dnsexit.com**

Username: youremail@ yourdomain.com (remember to use your whole lower email address as username)

Password: xxxxx (the password you choose for the mail box)

Outbound SMTP Port: **25, 26, 80, 587, 940, 2525, 8001**

Webmail to Access your Emails

Web address: https://webmail.dnsexit.com

Username: youremail@ yourdomain.com (remember to use your whole lower email address as username)

Password: xxxxx (the password you choose for the mail box)
 Unique solution ID: #1083
