

Mail Relay Outbound Service: How to verify that my IP is open relay

1) You need to make sure that your mail relay has sign up for open IP relay and the IP is added to your mail relay account. To check if the IP is there, login to your DNS Exit account (or click on My Account if already login). You should see the mail relay account under "Mail Relay" section. Click either "Manage" or the mail relay name to enter Mail Relay Control Panel. You should see the IP there next to "Open Relay IP addresses".

2) Make sure you are at the IP address by visiting whatismyip.com. Make sure the IP you see at whatismyip.com is the same as the IP you enter to your mail relay open IP.

3) You can test an email to verify that our mail relay system is open relay to your IP by using telnet command:

To verify that our mail relay system is open relay to your IP, you can use telnet command.

Note: Bold text are commands that you should type. Replace the red text with your own content. Blue text are comments.

```
>> telnet relay.dnsexit.com 25      #may use other ports 25, 26, 940, 80, 587 or 2525
```

```
Trying 64.182.102.186...
```

```
