# Domain Name Registration: How can I change my domain name servers (DNS servers)?

**A.** Login to your dnsExit account, click on 'whois' link next to the domain name and you will be brought to domain control panel. At the DNS section click on 'Modify' link to modify DNS servers. You do not need to type in the IP addresses. These are looked up automatically by the DNS. The DNS servers must be registered name servers otherwise errors will be thrown while submitting the changes.
